

PRESS RELEASE

AuviTran opens the AVB path for Yamaha RIVAGE PM users at InfoComm 2026

September shipping confirmed for AuviTran's AV-HY64-AVB card

LAS VEGAS & MONTBONNOT, France – June 17th, 2026 – French audio networking specialist and equipment manufacturer AuviTran will present the production-ready version of its AV-HY64-AVB card for Yamaha RIVAGE PM series mixing systems at InfoComm 2026 in Las Vegas.

First announced during ISE Barcelona earlier this year, the new AVB audio interface was met with strong interest from the professional audio industry. The presentation at InfoComm marks the next step toward commercial release, with the card scheduled to begin shipping in September 2026 from AuviTran's Sales Department.

The dedicated AVB upgrade path for RIVAGE PM systems

Designed specifically for Yamaha's RIVAGE PM ecosystem, the AV-HY64-AVB card enables audio professionals to add AVB connectivity to existing and future RIVAGE PM systems. For system designers, rental companies, venues and live sound engineers working with the RIVAGE PM platform, it provides a clear answer to a specific connectivity requirement: bringing AVB workflows into one of the industry's leading digital mixing environments.

The interface expands networking and routing flexibility for high-end live sound, fixed installations and immersive audio environments, while supporting the low-latency, standards-based transport expected in complex professional audio architectures.

Enhanced features for demanding workflows

Developed to expand compatibility options for Yamaha RIVAGE PM systems, the AV-HY64-AVB card enables high-precision audio distribution across professional systems incorporating the AVB protocol. From public address systems and native digital fixed installations to immersive sound environments and live productions, the card provides a direct digital path from console to amplifiers or immersive processor, reduces conversion stages and supports the low-latency, ultra-stable clock synchronization expected in demanding AVB workflows.

"With AuviTran's AVB interface, RIVAGE PM users now have dedicated access to AVB workflows without changing the core of their mixing environment. Moving from the ISE preview to production-ready hardware for InfoComm is an important milestone, and we are proud to bring this new connectivity option to audio professionals preparing their systems for increasingly networked live, installed and immersive applications." states Xavier Allanic, General Manager for Digigram and AuviTran.

Next Step: InfoComm presentation and September rollout

During InfoComm 2026, the AV-HY64-AVB card will be presented at the booth of AuviTran's distribution partner Synthax, Booth C9513, where visitors will be able to discover the interface and discuss its integration into RIVAGE PM environments.

Capitalizing on its past experience, AuviTran will engage in the MILAN certification process, reinforcing its commitment to open standards, interoperability and dependable audio infrastructures.

The AV-HY64-AVB card is scheduled to begin shipping in September 2026 and will be available through AuviTran's sales department.

Commercial inquiries and technical consultations can be arranged directly with AuviTran at sales@auvitran.com.

About AuviTran

For more than 20 years, AuviTran has been a pioneer in Audio Networking Solutions. Its Audio ToolBox suite is the spearhead of its Bridging the gap motto. AuviTran solutions bring interoperability into reality, providing seamless audio network solutions to multiple broadcast infrastructures and live installations worldwide. AuviTran solutions are available through its network of distributors and at sales@auvitran.com.

About Yamaha Corporation

Founded in 1887, the Yamaha Group has established itself as a global leader in manufacturing musical instruments and audio products while continuing to engage in various business activities to grow services related to sound and music. Yamaha operates over 60 subsidiaries worldwide, dedicated to serving millions of customers across six continents, focusing on delivering excellence in quality and innovation, prioritizing sustainability efforts and contributing to people's "well-being".
